APS-ZOO overview

APS-ZOO is a compact TeX/PDF entrance for abstract provability systems (APS) and second incompleteness phenomena. The HTML page is only an index; the mathematical tables below are served as TeX-compiled PDF files.

Map of the zoo

Object	Role in the zoo	Output
APS	Basic algebraic environment with operations for provability-like predicates.	classification
Implicative APS	APS equipped with an implication operation and related preservation principles.	implication matrix
G2 / FG2 layer	Formal and weak forms of the second incompleteness phenomenon.	G2 chain
Countermodels	Finite structures separating axioms and implications.	model cards
Domain algebra	A bridge toward fixed points, contexts, and domain-theoretic readings.	algebra-domain

Reading order

Start with the classification table, then compare truth tables and countermodels. The implication matrix records the dependable arrows; the G2 documents collect the incompleteness-specific layer.
